

Homoeopathic Approach To Malignancy

Dr. ANIL SHARMA M.D(Hom),PhD.(Psy.)

Its derived from a LATIN word MALE-BADLY GNUS-BORN MALIGNANCY is the tendency of a medical condition to become progressively worse . A term for diseases in which abnormal cells divide without control and can invade nearby tissues. Malignant cells can also spread to other parts of the body through the blood and lymph systems. There are several main types of malignancy.

ISSN 2454-308X

Carcinoma is a malignancy that begins in the skin or in tissues that line or cover internal organs. Sarcoma is a malignancy that begins in bone, cartilage, fat, muscle, blood vessels, or other connective or supportive tissue. Leukemia is a malignancy that starts in blood-forming tissue, such as the bone marrow, and causes large numbers of abnormal blood cells to be produced and enter the blood. Lymphoma and multiple myeloma are malignancies that begin in the cells of the immune system. Central nervous system cancers are malignancies that begin in the tissues of the brain and spinal cord. Also called cancer.

Aetiology Of Cancer : Most cancers are related to environmental, lifestyle, or behavioral exposures

- CHEMICALS
- DIET & EXERCISE
- INFECTION
- HERIDITORY
- PHYSICAL AGENTS
- HORMONES

Although stress can cause a number of physical health problems, the evidence that it can cause cancer is weak. Some studies have indicated a link between various psychological factors and an increased risk of developing cancer, but others have not. Apparent links between psychological stress and cancer could arise in several ways. For example, people under stress may develop certain behaviors, such as smoking, overeating, or drinking alcohol,

which increase a person's risk for cancer. Or someone who has a relative with cancer may have a higher risk for cancer because of a shared inherited risk factor, not because of the stress induced by the family member's diagnosis.

Homeopathic understanding and management of 'chronic disease' is based on the concept of 'miasms : Homeopathic understanding and management of 'chronic disease' is based on the concept of 'miasms'. Now, let us try to analyze the concept of miasms and chronic diseases in the light of scientific understanding of molecular biology, 'similia similibus curentur' and 'potentization . Human organism is constantly exposed to the attacks of various types of exogenous and endogenous foreign molecules and ions. They may bind to the complex native biological molecules, thereby deforming their configuration and making them incapable of participating in the normal bio-chemical interactions. As per scientific view, this phenomenon underlies the molecular basis of most pathological conditions.

If the pathological foreign molecules are of protein nature, native biological defense proteins having configurational affinity to these foreign proteins attaches to them, destroys and removes them from the organism as part of body's defense mechanism. During this defense process, some of the involved native protein molecules get configurationally deformed by the interaction with foreign molecules. Native protein molecules so deformed will be carrying the 3-D special impressions of the interacted foreign molecules on their periphery. These impressions exist as three dimensional pockets, having a configuration complementary to that of foreign proteins. These molecular imprinted proteins thus become incapacitated for their normal biological processes, and remain a burden in the organism. Antibodies actually belong to this class of such deformed globulin proteins, subjected to 'molecular imprinting' by foreign proteins. Certain endogenic molecules and ions such as hormones, neuro-chemicals, and other metabolic byproducts such as super-oxides, when circulated in excess, may also attach to various bio-molecules other than their natural targets, and induce configurational changes in them.

These deformed native proteins may circulate in the system, and accidentally attach to various bio-molecules having complementary configurational affinity, thereby creating various molecular errors and pathological deviations. Configurational changes happening in enzymes of protein nature involved with genetic expressions and DNA synthesis may

ultimately lead to various types of proteinopathies, or may result in mutations happening in genetic substance itself, with subsequent hereditary diseases. If the enzymes involved in genetic expressions get deformed by molecular imprinting, it may affect the process of normal protein synthesis, and produce related pathological conditions. Obviously, modern scientific knowledge regarding subjects such as antibodies, proteinopathies, genetic expressions, molecular imprinted proteins, etc., were not available during the era of Hahnemann, when he undertook the study of chronic diseases. Had he understood the exact

Miasms

bio-molecular basis of these phenomena, he would have provided a theory of chronic diseases entirely different from that he had formulated. At that time, it was the wonderful insight of the great genius of Hahnemann that enabled him to observe the deep-seated factors playing behind the chronic diseases that he called ‘miasms’

Had he understood the exact bio-molecular basis of these phenomena, he would have provided a theory of chronic diseases entirely different from that he had formulated. At that time, it was the wonderful insight of the great genius of Hahnemann that enabled him to observe the deep-seated factors playing behind the chronic diseases that he called ‘miasms’. He observed that in spite of the various crude forms of treatments available then, these diseases continued their manifestations during the whole life span of patients. Naturally, his theory of chronic disease was more involved with the long term effects of these diseases. He

used the term ‘miasm’ to describe these chronic disease factors. By the term ‘miasm’, he really meant ‘disease poisons’

In homoeopathy, cancer is called to be a chronic constitutional disease- caused by a chronic miasm- psora, sycosis & syphilis- in short, irritation, proliferation & destruction. Homoeopathy plays an important role in prevention & management in all stages of cancer by the process of “individualization” clinical research shows, hereditary background of cancer or diabetes mellitus or tuberculosis or all three or other degenerative/proliferative chronic disease etc are held responsible for the inroad of cancer. The newly discovered “carcinogens” are the cause of formation of cancer cells. The three general classes of carcinogens are radiation, chemicals & viruses. The medical scientists are into research & experiments on “immuno therapy” to cure cancer but are yet to come up with thorough conclusion

In homoeopathic system of treatment the medicine after succussion generates electrifying power in the light of modern science. During the process of preparation it evolves the power to meet the disease process. This is called “high light isotopes” by modern science

The powerful homoeopathic medicine instead of causing any side effects works on the actual disease & also activates the immune system, so that it may get cured through antigen-antibody. On contrary, in case of chronic reversible diseases deep acting homoeopathic anti-miasmatic medicine will help to cure slowly & gradually by the mutagenic power of medicine or by process of reverse mutation in reversible cases.

It may be stated that, modern school of life science admits when the function of a minute chemical particle having favourable functions reaches the chromosomes & may have fruitful effect, likewise (electro magnetic change effect) change the genetic system through haemostasis process.

Hence it is not too difficult to accept the fact that homoeopathy is the best possible medication that may be given to a cancer affected individual. A fact that is still to be searched by the medical scientists.

In cancer- homoeopathic medicine works with promising result after & during conventional therapies.

In all chronic cases, the old suppressed symptoms should come out in the surface following betterment of internal & mental symptoms (herin law of cure)

Conclusion : in conclusion , suitable anti- psoric medicine to be given to prevent relapse of cancer & other chronic incurable diseases. Vegetarian diet with high fluid intake is advisable to eliminate the toxins from the body.
